

# This is an Open Public Invitation to Fellow Christians in East Tennessee to Attend an Exciting Free Seminar on *The Revolutionary Scientific Good News Of Discovery of Christ's Fingerprints of Creation Affirming the Literal Account in the Book of Genesis!*

**The Speaker**  
Scientist and Christian, Bob Gentry

**The Place**  
Alumni Memorial Building, James Cox Auditorium on the campus of the University of Tennessee, Knoxville (see map)

**The Time**  
Wednesday April 9, 7:00 – 8:00 PM followed by a brief Q&A

Part of Christ's very good news for us today is our memory of the recent commemoration of His resurrection and victory over death and the grave. But for those who lived and experienced it when it happened, it was indeed *revolutionary* good news. More good news for us today is that from Micah 5:2 we learn Christ existed from everlasting; so He was always One with the Father throughout eternity past. Those who were privileged to see and hear the One who came from Eternity to be God-with-them indeed experienced another *revolutionary* experience.

Every day TV, radio, and newspaper media are bringing to us reports of findings of fossils presumed to be millions of years old, of geologic formations that supposedly evolved over hundreds of millions of years, and of stars and merging galaxies that began many billions of years ago. Inevitably, the commentary accompanying all this is always that these findings are but the evolutionary consequences of the universe's big bang some 13 billion years ago. This, evolutionary scientists confidently say, disproves Genesis' literal account of rapid creation and by extension, many say, everything else in the Bible as well. Yes, this is what the evolutionists have long taught as absolute truth. Not surprisingly I came out of my university physics training very much convinced it was just as they say, and that the Genesis days of creation were not literal at all, but instead represented evolution's long cosmic and geologic epochs and that life on Earth began in some ancient slimy pool crawling with unknown and unknowable entities that somehow by chance had a special affinity for one another.

Then, as I, Bob Gentry, much later reflected on my distrust of Christ's description of His Genesis Creation, I realized I no longer had any basis for trusting Christ as Creator or Redeemer. Everything was up for grabs, so to speak. I couldn't live like that, so I decided, no matter the cost, to conduct my own investigation as to whether the evolution my professors had taught me was truly scientifically factual or instead the greatest hoax and fraud in the history of science. Instantly roadblocks were thrown in my path at Georgia Tech where I had begun my doctorate in physics; the decree from the department chair was either give up my idea of reinvestigating creation and the age of the Earth or leave the program. I left to pursue I knew not what.

Incredibly, less than a year later, in answer to prayers for Christ's guidance, in a miracle of His Providence, He allowed me in one fell swoop to discover the unique scientific evidence – God's Fingerprints of Creation in Earth's Foundation Rocks -- that validates the literal Genesis account and at the same time overthrows all of evolution's long-age, biological, geological, and cosmic scenarios.

Christ designed the evidence so that even an intelligent ten-year-old can easily understand how it disproves geologists' theory that granite rocks such as El Capitan, Pike's Peak and Mt Rushmore formed deep in the Earth from slowly cooling magma over tens of millions of years. Just as Alka-Seltzer bubbles quickly disappear from a glass of water, they would even more rapidly disappear if Alka-Seltzer tablets were somehow dropped into a large pool of red-hot molten magma deep in the earth. Now, is there any way that bubbles in Alka-Seltzer water could be retained? It would be hard to do, but it could be done if the glass with bubbles were instantly dipped into liquid nitrogen, which is very cold. The water would freeze almost immediately and the bubbles would remain captured in the ice. But what has this to do with Christ's

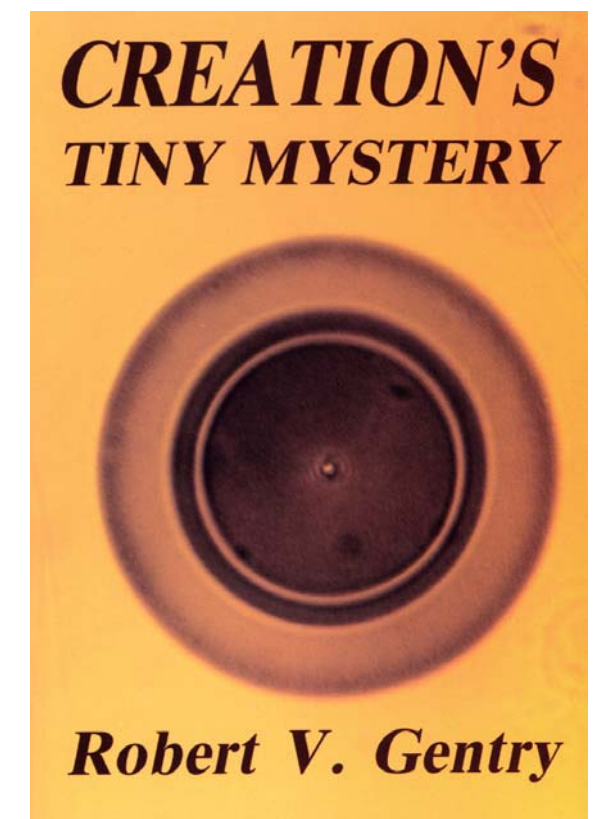

Fingerprints of Creation found in the granites of El Capitan, Mt Rushmore and Pike's Peak, and thousands of other granites all over the world? Just this.

When Christ called the Earth into existence on Day 1 of creation week, He also placed tiny, invisible specks of certain types of very rapidly decaying radioactive atoms within these granites and other hard crystalline rocks that form the hard rocky foundations of Earth's crust. Just as light impinging on Polaroid film leaves its imprint without any further developing, so do the rapidly emitted nuclear particles penetrate the rock surrounding the tiny radioactive center and imprint it with microscopic colored spheres that are revealed as rings after the rock is thinly sliced and placed under the microscope. The important thing to understand is that the rock had to be a solid before it would retain the imprint of the particles and produce the colored rings or halos seen in the photo on the accompanying cover of the Fingerprints of Creation DVD. That is, the rock had to be created very rapidly simultaneously with the rapidly decaying atoms because, if the material was initially molten instead being hard, the rapidly emitted particles would all have disappeared before the rock eventually cooled to a hard rock, and thus no Fingerprints of Instant Creation would ever have developed.

This is the Revolutionary Good News I sought and prayed for. Christ designed His Fingerprints so that no one – evolutionist or otherwise – can counterfeit them. This discovery has become a tremendous faith-building experience both for me and for many others who have learned of it through details in my book, *Creation's Tiny Mystery*, and the DVDs *Fingerprints of Creation* and *The Young Age of the Earth*, both of which have been aired on Public Broadcasting in years past, and are still being aired on certain TV satellite networks.

My hope is that it will be the same for at least a few of those who attend on Wednesday evening when I will further explain why I am now being exceptionally forthright in bringing this discovery to public attention, namely because of the failure of the worldwide scientific community to follow scientific protocol following my repeated publication of it in the worlds' leading scientific journals during my thirteen-year-long Guest Scientist position in the Chemistry Division of the Oak Ridge National Laboratory.

Normally when a scientist publishes a discovery that even slightly challenges an established theory in science, then other scientists, in whatever field that is being challenged, quickly bring the issue to the center of scientific attention, and on many occasions even the center of public attention, because it is the nature of the scientific establishment for scientists to enhance their reputations by either confirming or disproving the new result. But in this case the scientific community's reaction to this discovery has been a deafening silence for over twenty five years. The

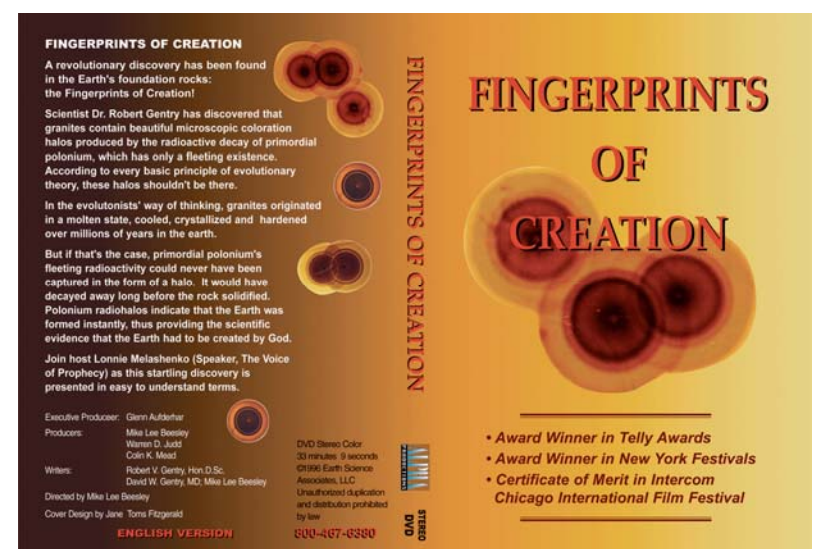

Front cover of this 364 page paperback book

reason is obvious. I'll speak more about it on Wednesday. In the meantime those who wish to learn more about the Fingerprints of Creation prior to Wednesday may do so by reading my scientific reports and my book, *Creation's Tiny Mystery*, online at my website [www.halos.com](http://www.halos.com).

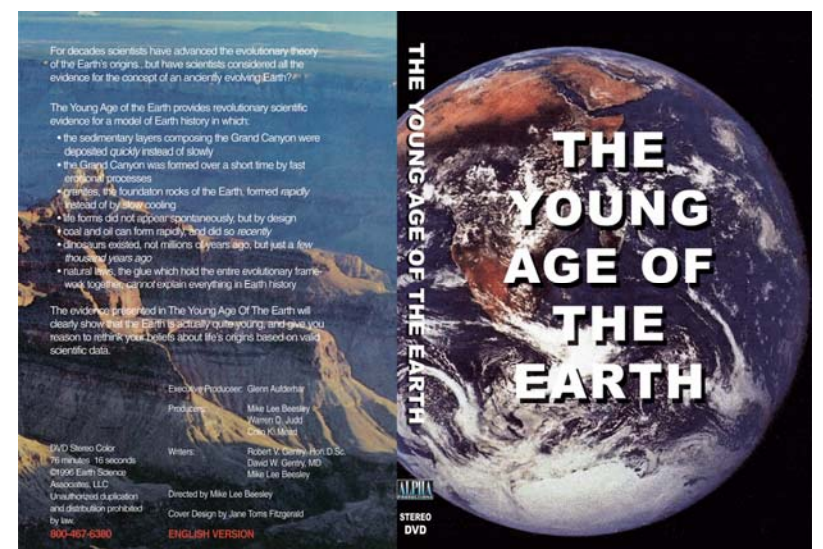

Also on the website are the DVDs referred to above, which are streamed free of charge. Those wanting to obtain personal copies of my book and the DVDs can do so by calling the fulfillment service number, 1-800-467-6380.

Lastly, although we won't have time to discuss it Wednesday evening, Christ has also enabled me to discover huge flaws in the popular big bang theory and then to also develop a new cosmic model of the universe that agrees with the Genesis creation account. Some details of all this are given in the *Center of the Universe* DVD shown here. Until Wednesday evening I remain,

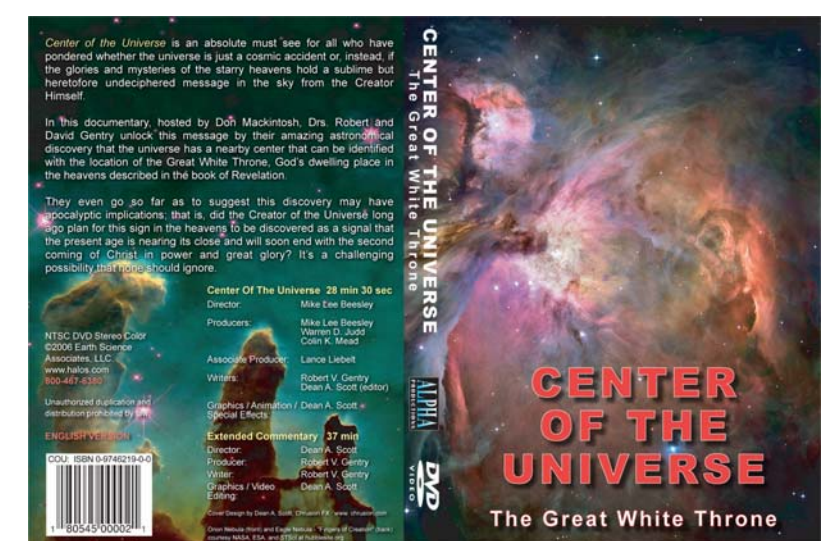

Yours in the Master's service,  
Bob Gentry
